

Designing Systems that use AI

In this module, you learn to ...

01

Break complex processes into discrete tasks

02

Determine if and how AI can be used to help humans perform their tasks

03

Architect AI solutions that leverage Google Cloud tools

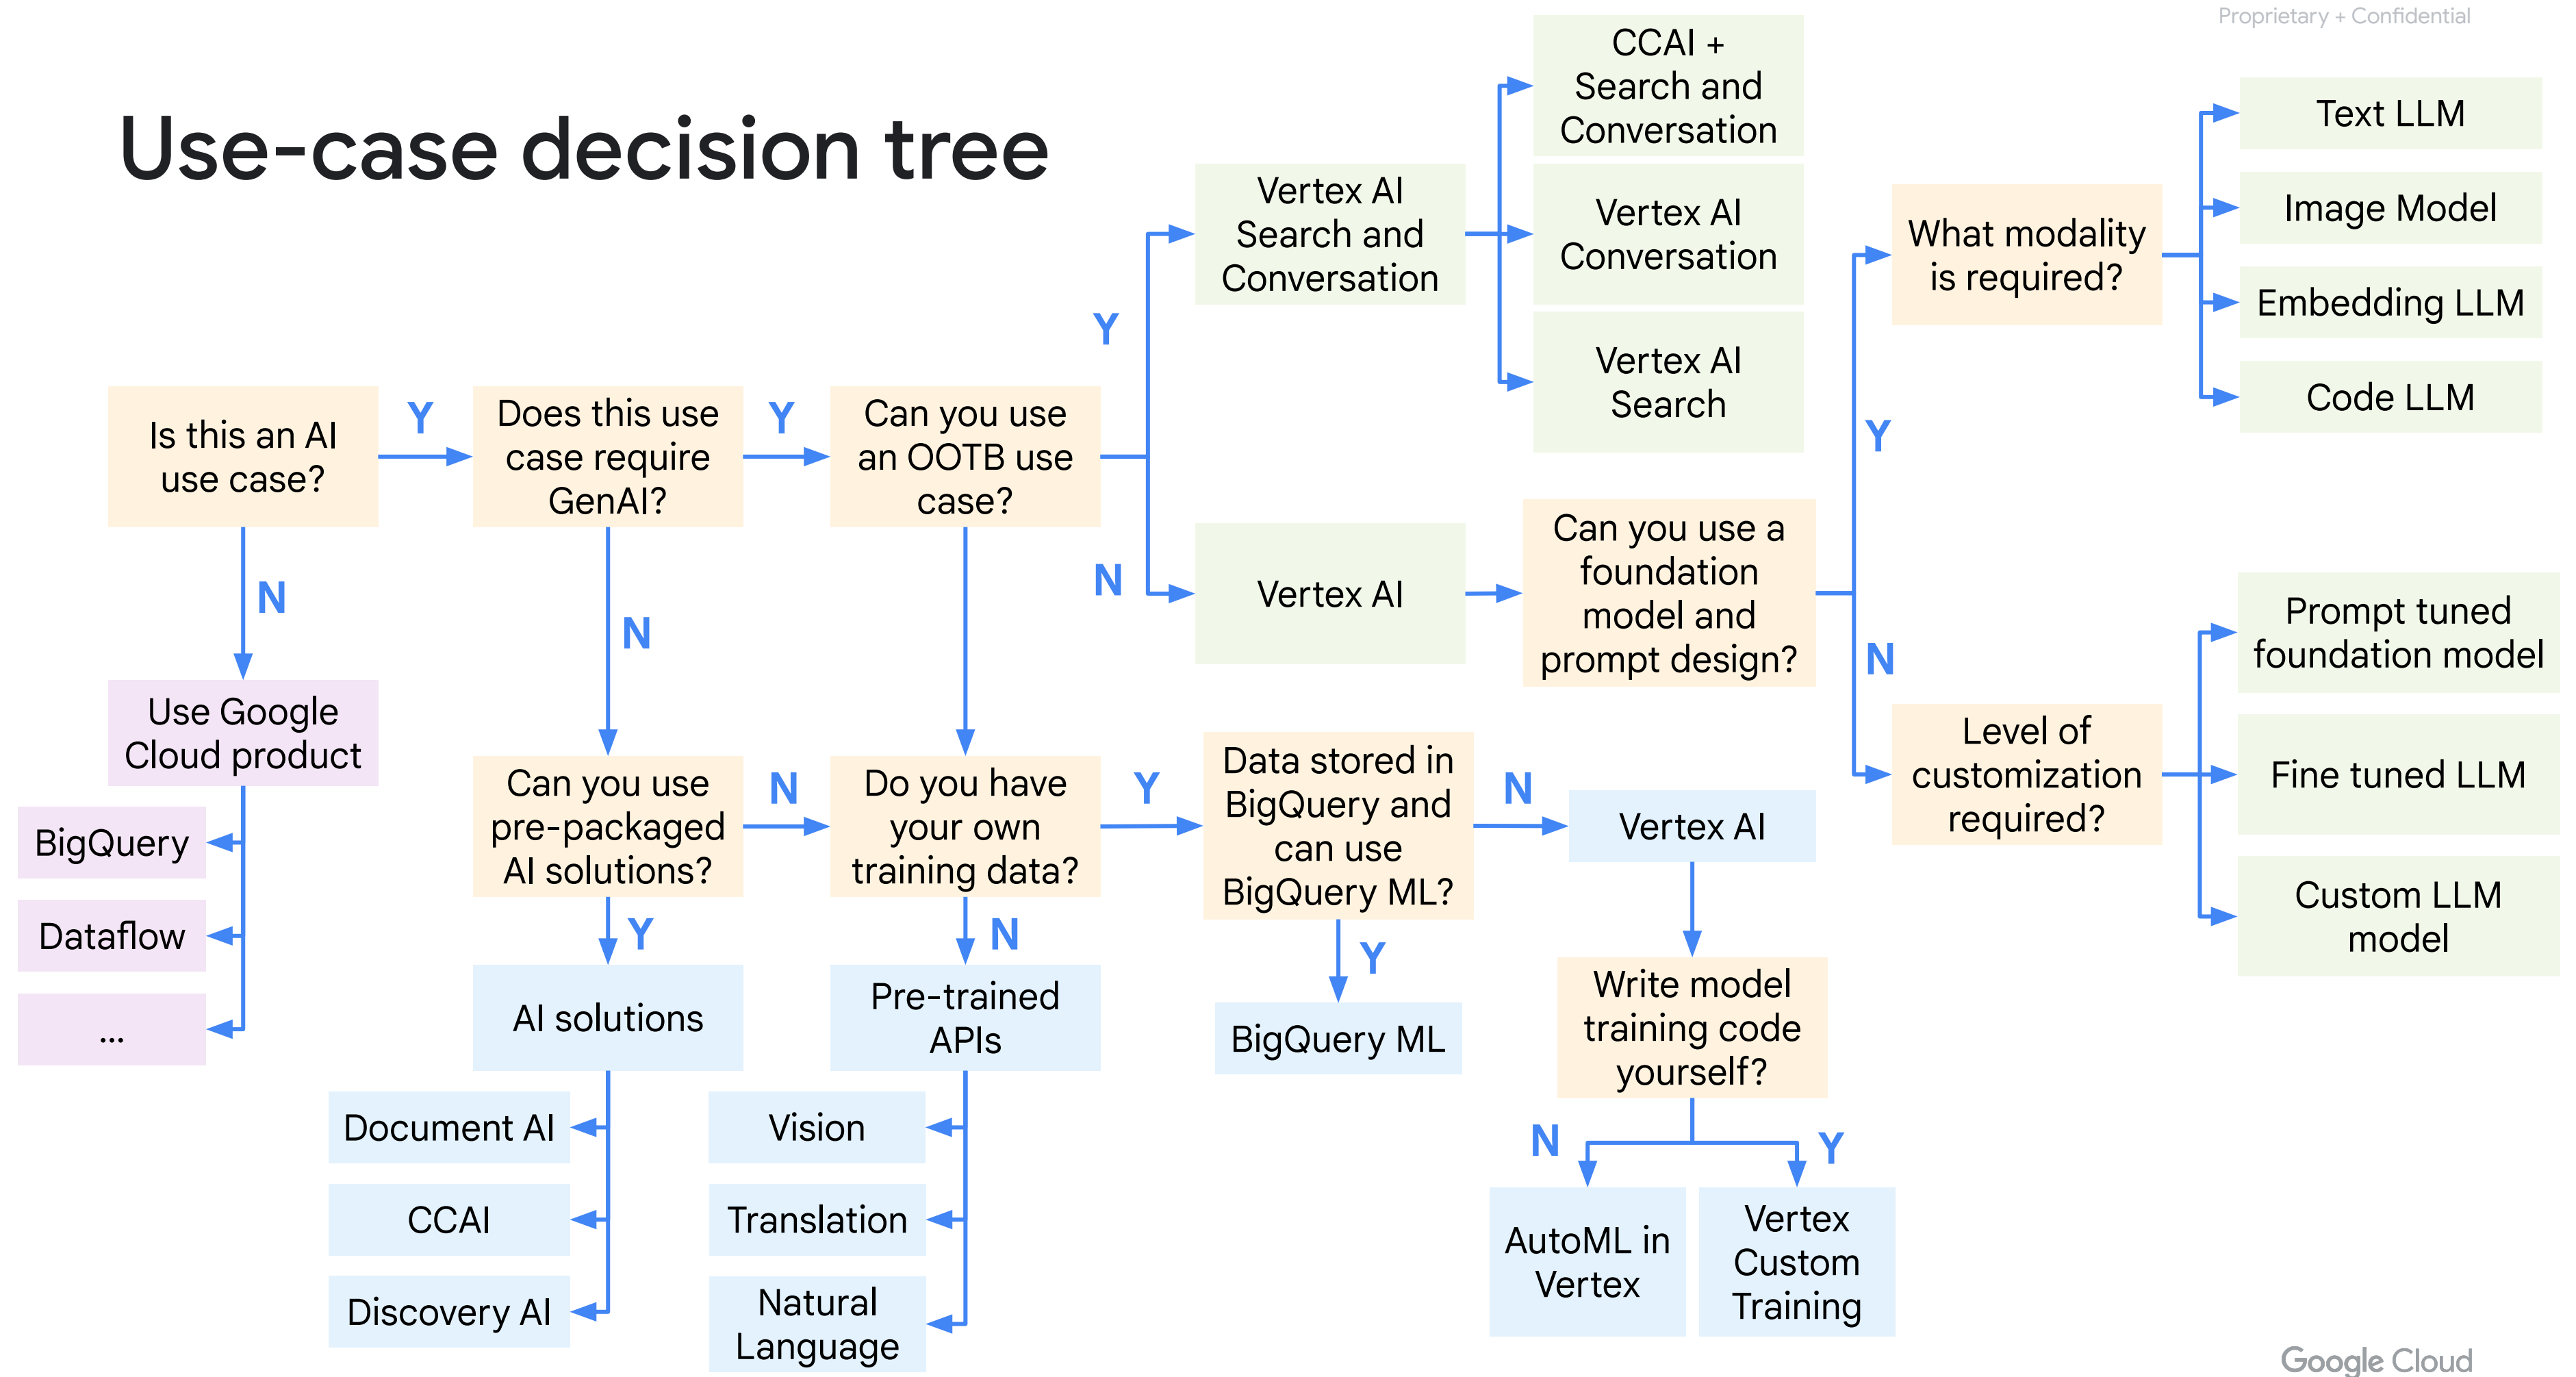

Topics

- | | |
|----|--|
| 01 | Automating Business Processes with AI |
| 02 | Product Catalog Management Case Study |
| 03 | Architecting the Catalog Management Solution |

For each task where you are considering AI,
consider how you would approach it both
with and without AI to weigh cost & performance.

Use-case decision tree

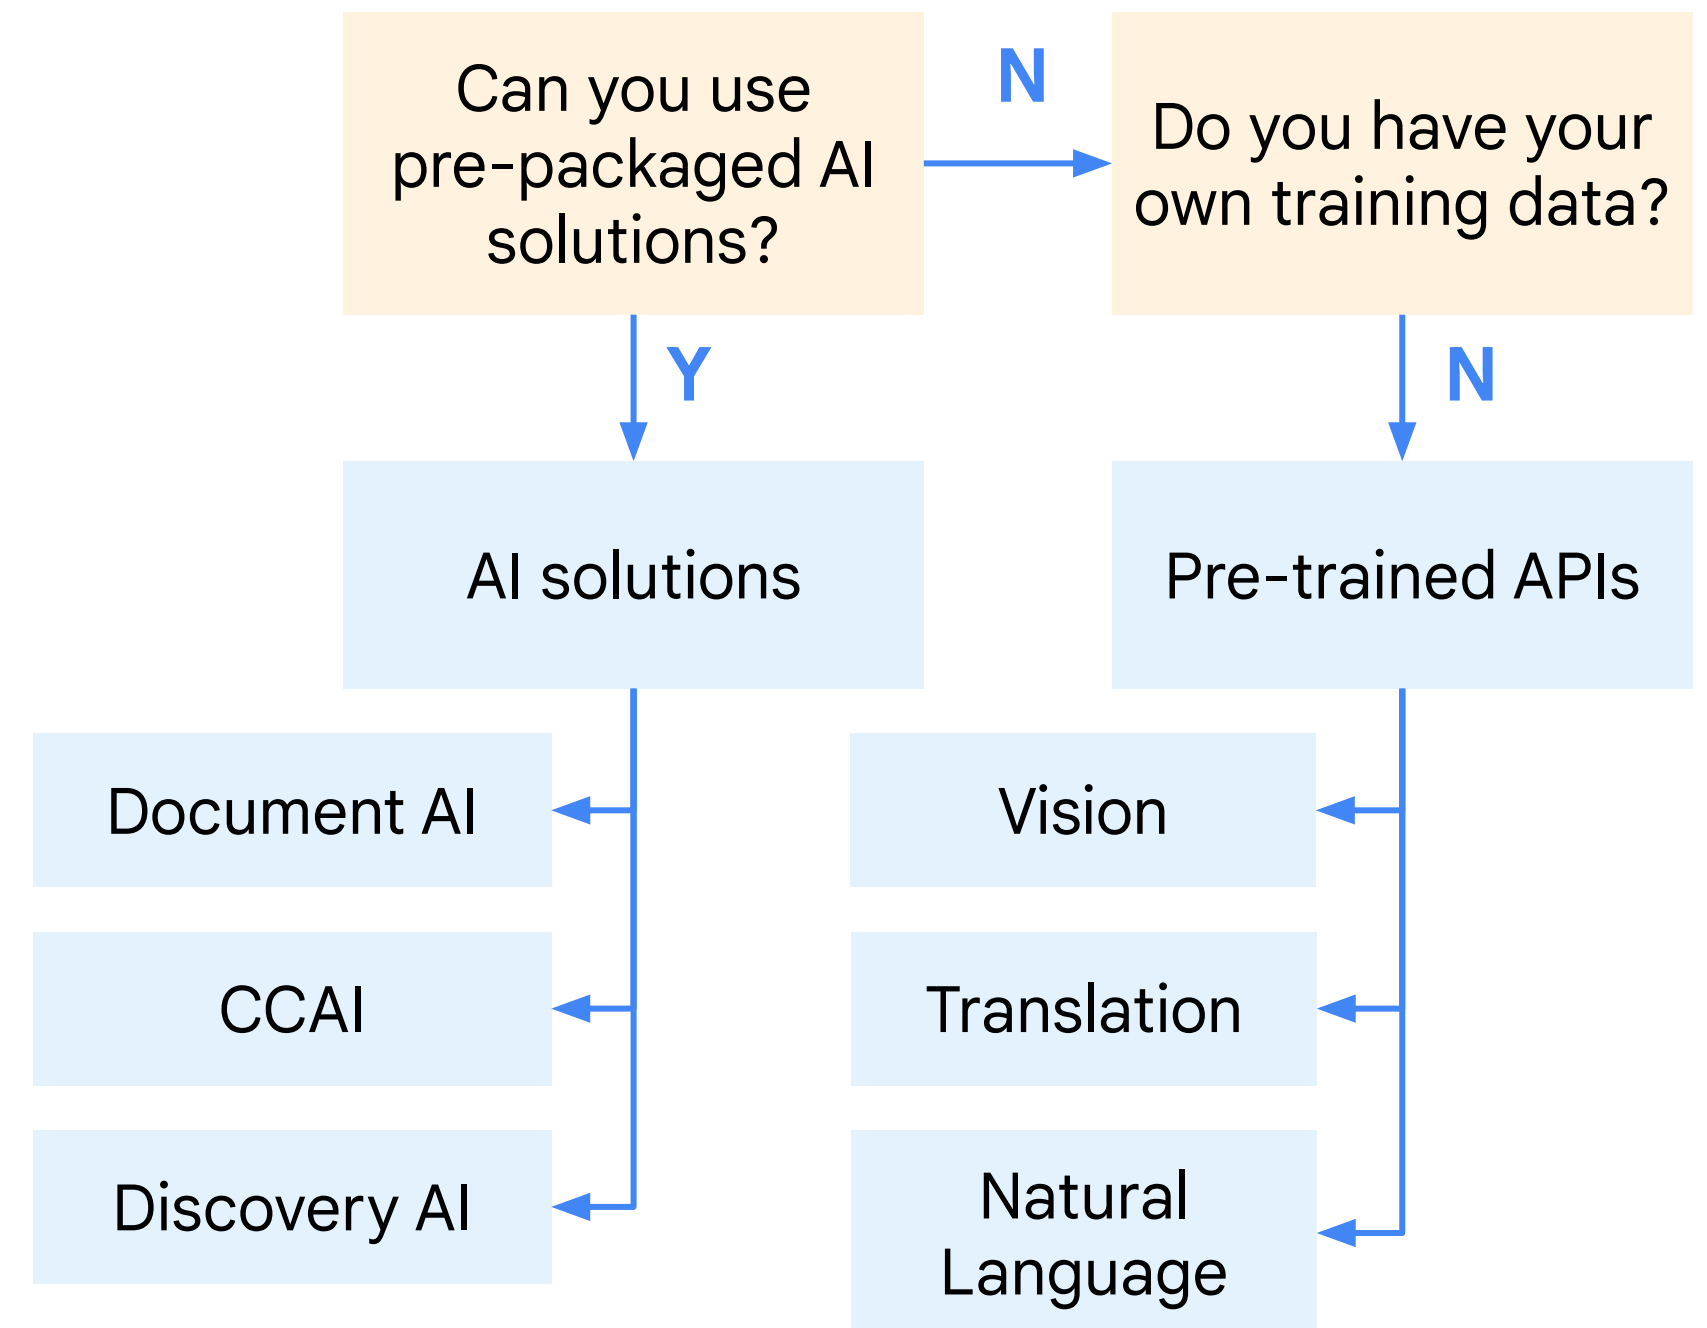

Not all automation problems are AI problems

- Sometimes there are traditional programming solutions to automating tasks
- Find the right Google product
- Use the simplest way that works

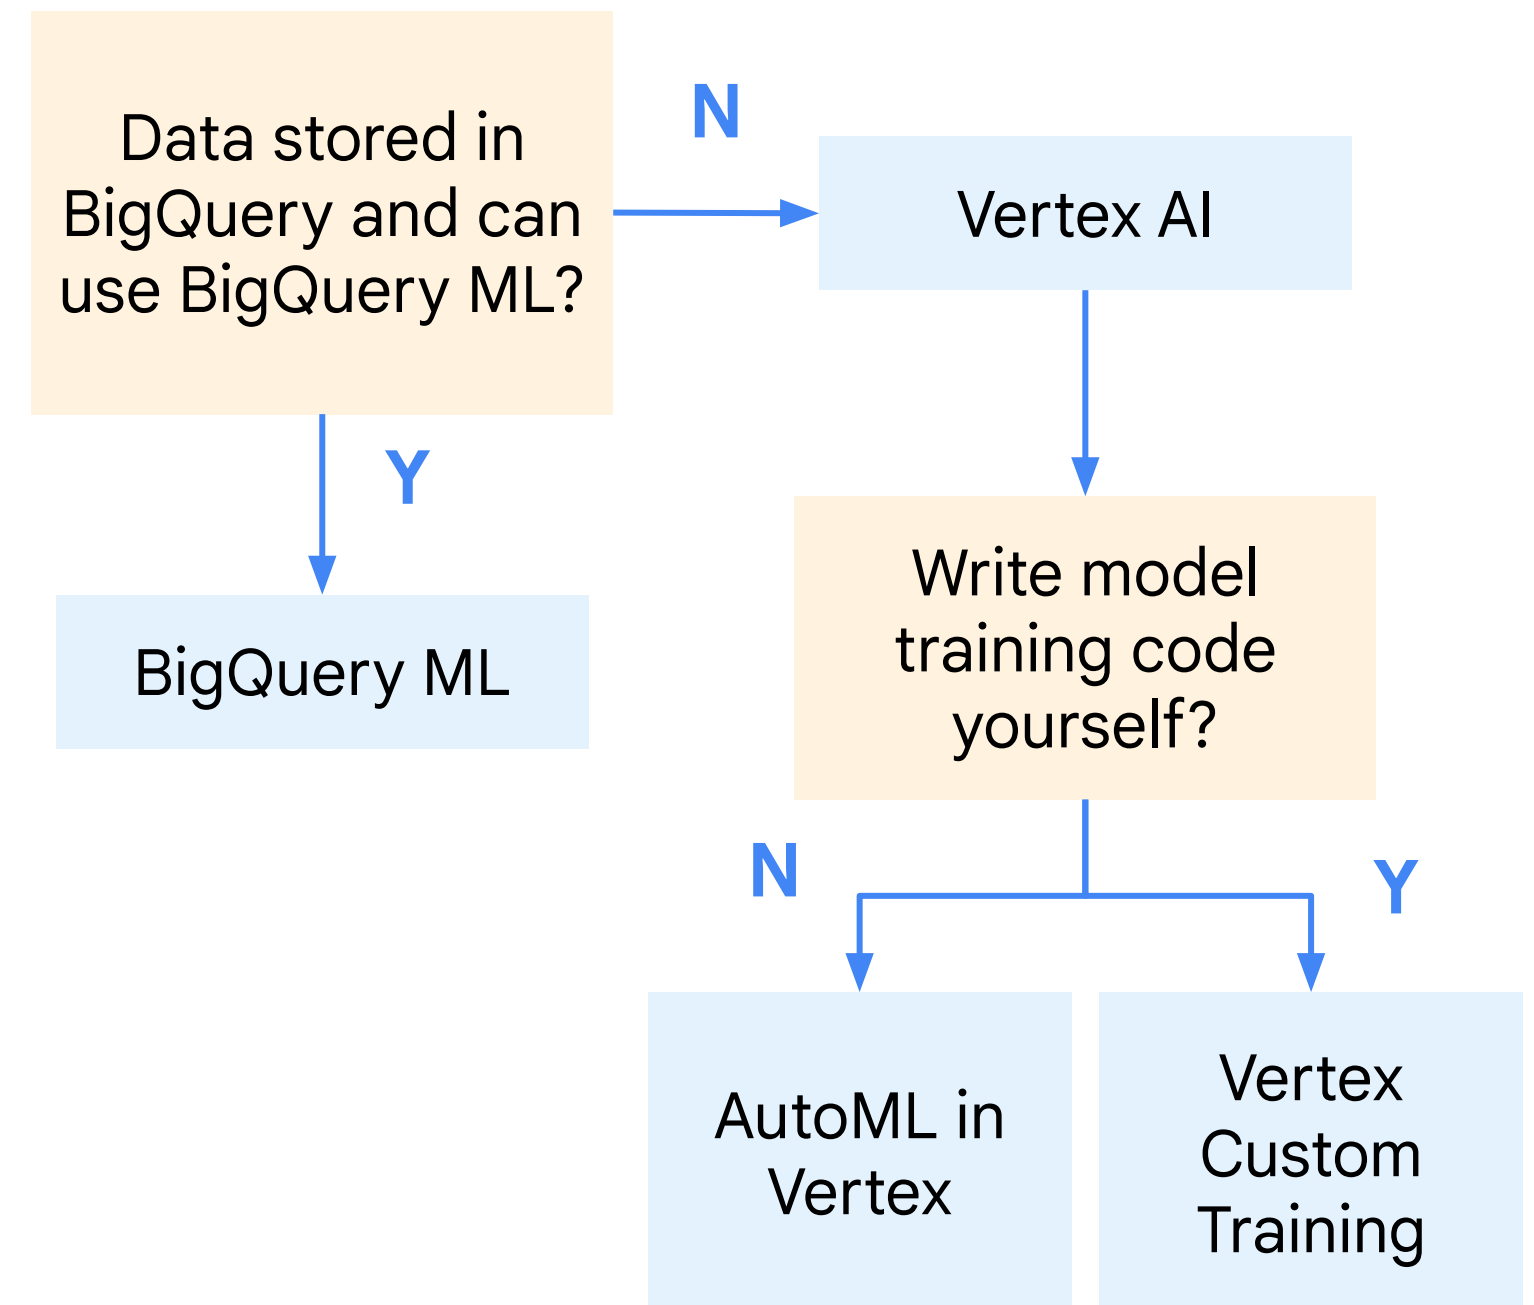

Not all AI problems are generative AI problems

- Smaller ML models will often perform an AI task as well as a foundational model
- Smaller models are cheaper and will likely provide better performance
 - Translate API for translation
 - Vision API for object detection, classification, and labels
 - Natural Language API for sentiment analysis
 - Etc.
- Google has out of the box solutions for common AI problems
 - Document AI
 - CCAI

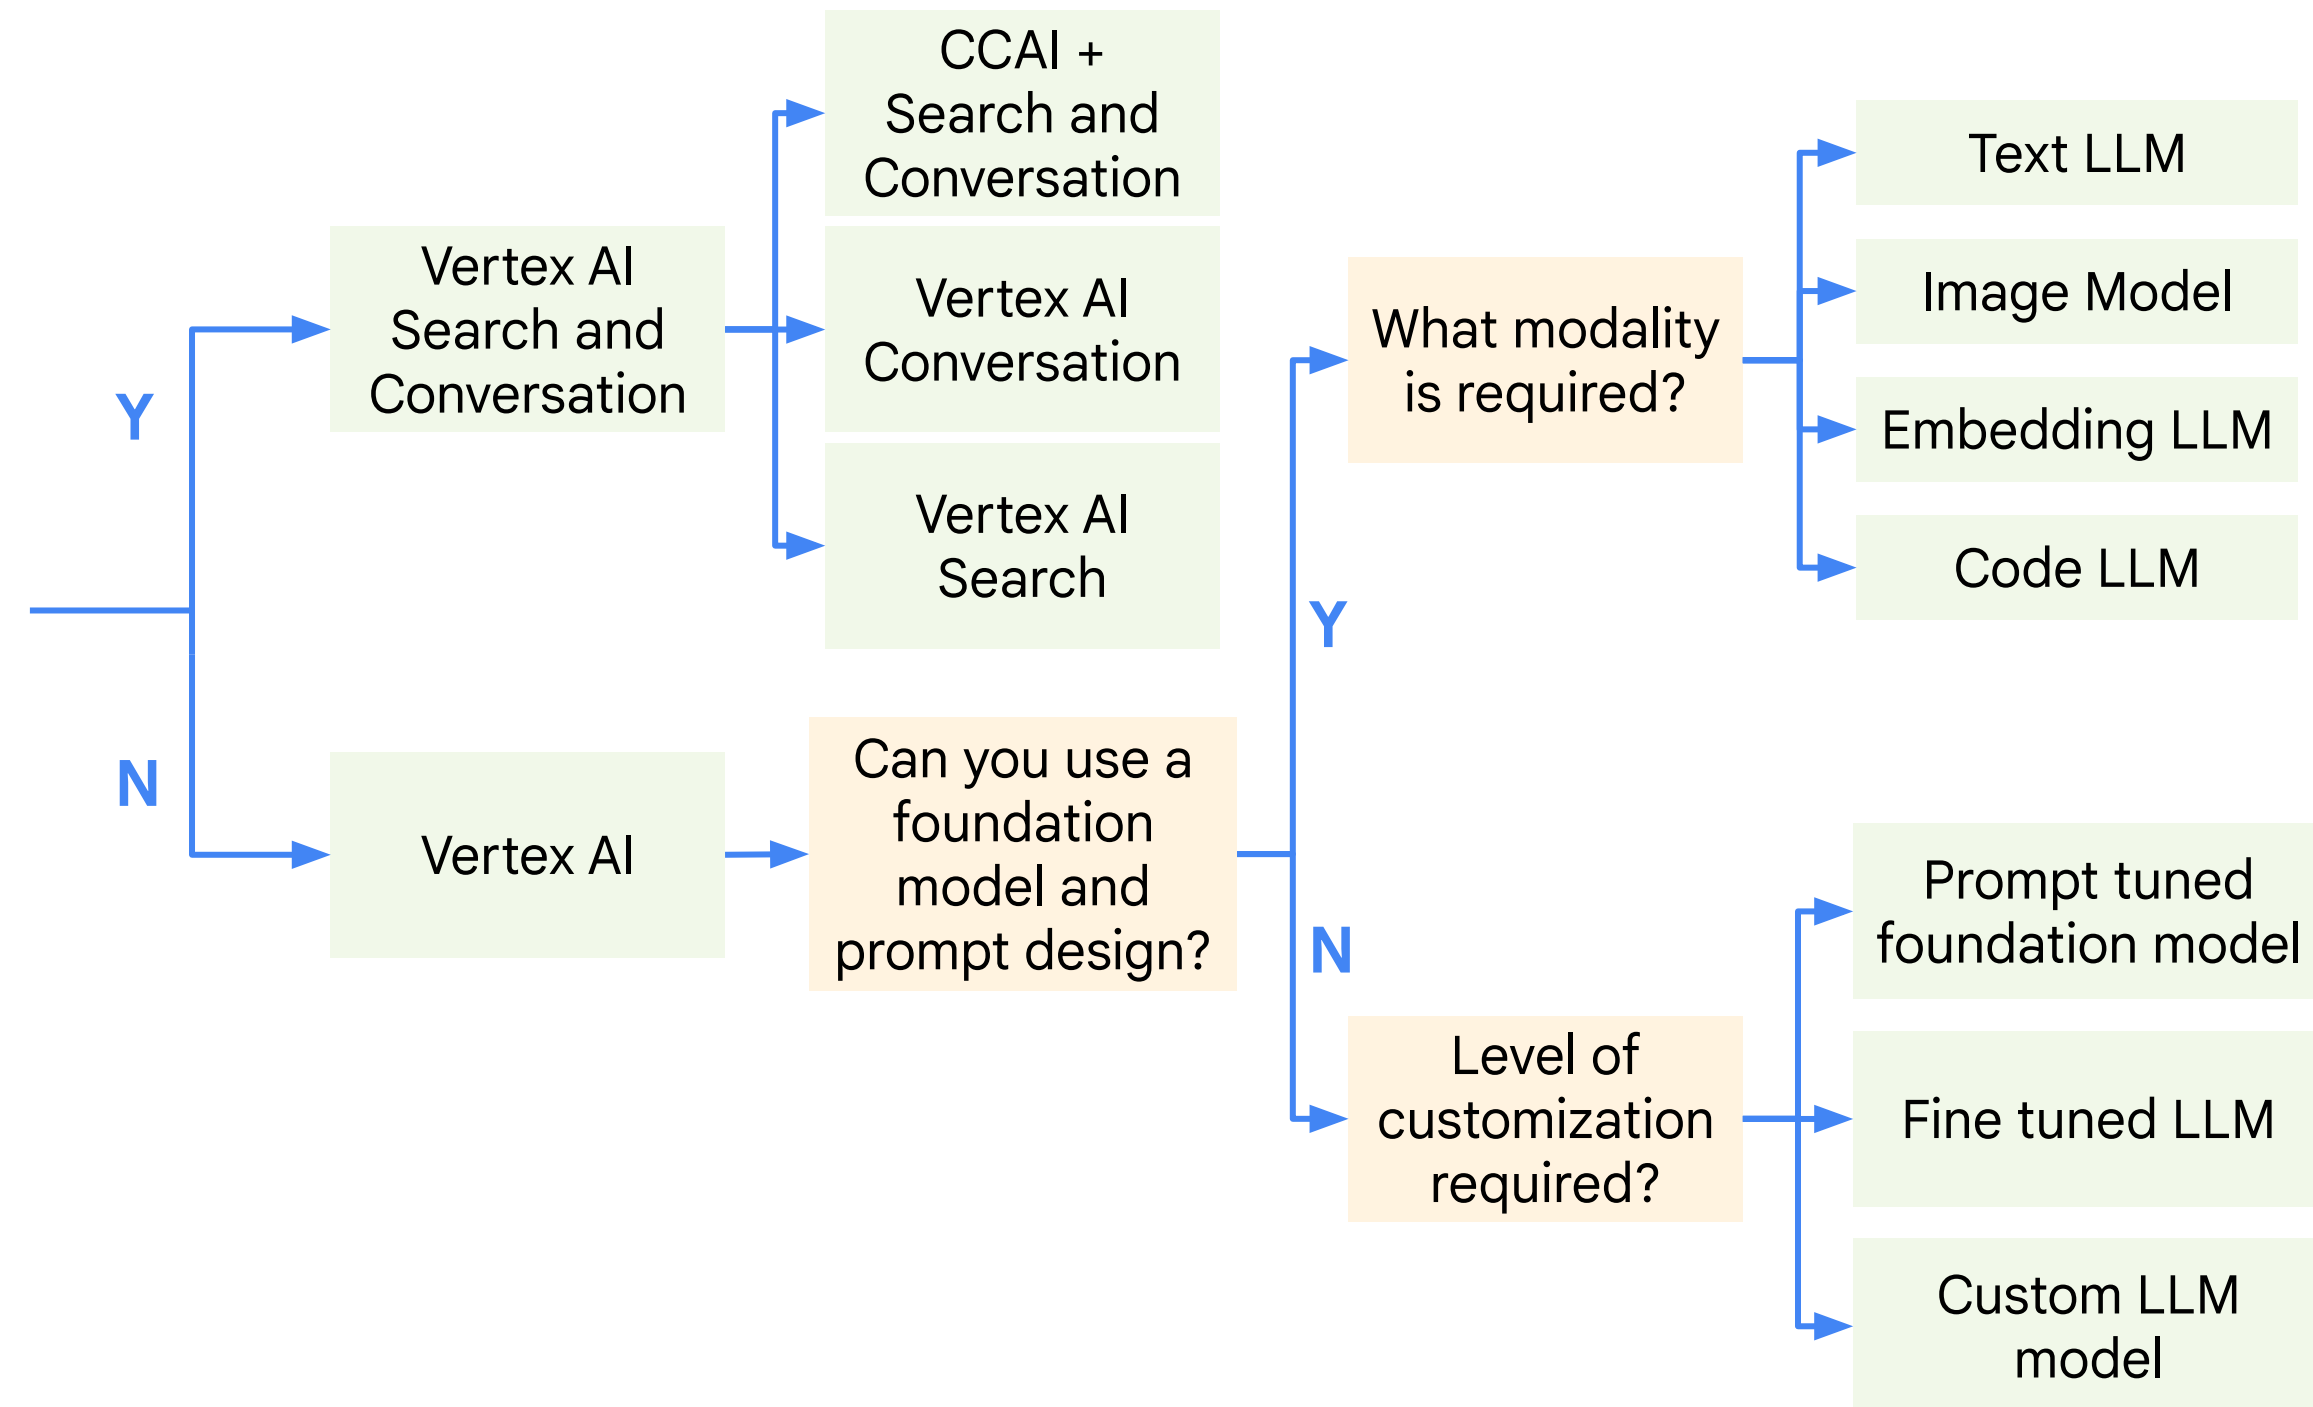

You can use BigQuery ML, Auto ML, or Vertex AI training to create your own ML models

- Requires your own training data
- Requires machine learning expertise

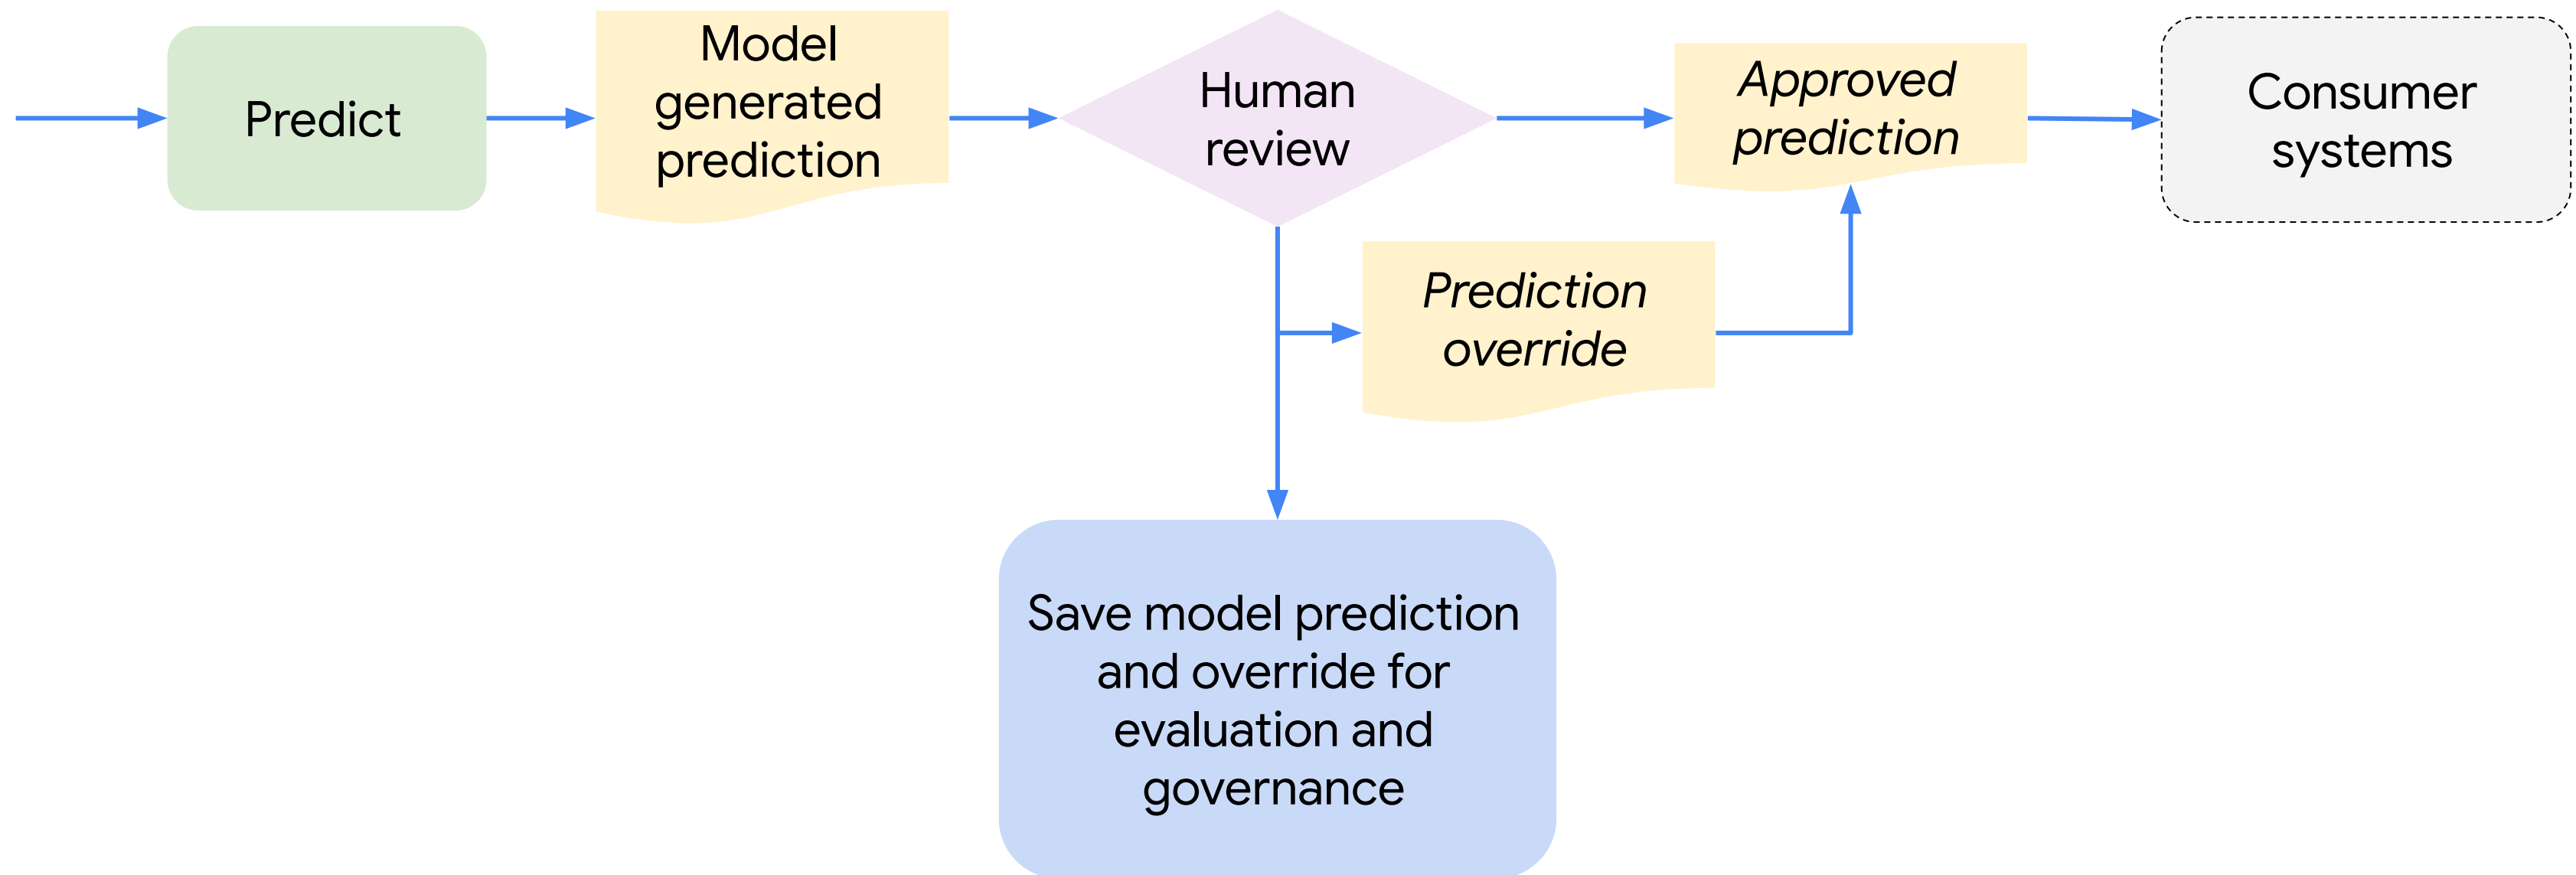

For GenAI problems, use the right generative AI model

- Gemini
- PaLM
- Chat PaLM
- Codey
- Embeddings
- Imagen
- Etc.

Do you need a human in the loop?

If you can improve prediction quality, then the need for humans in the loop becomes less critical

Prompt Engineering

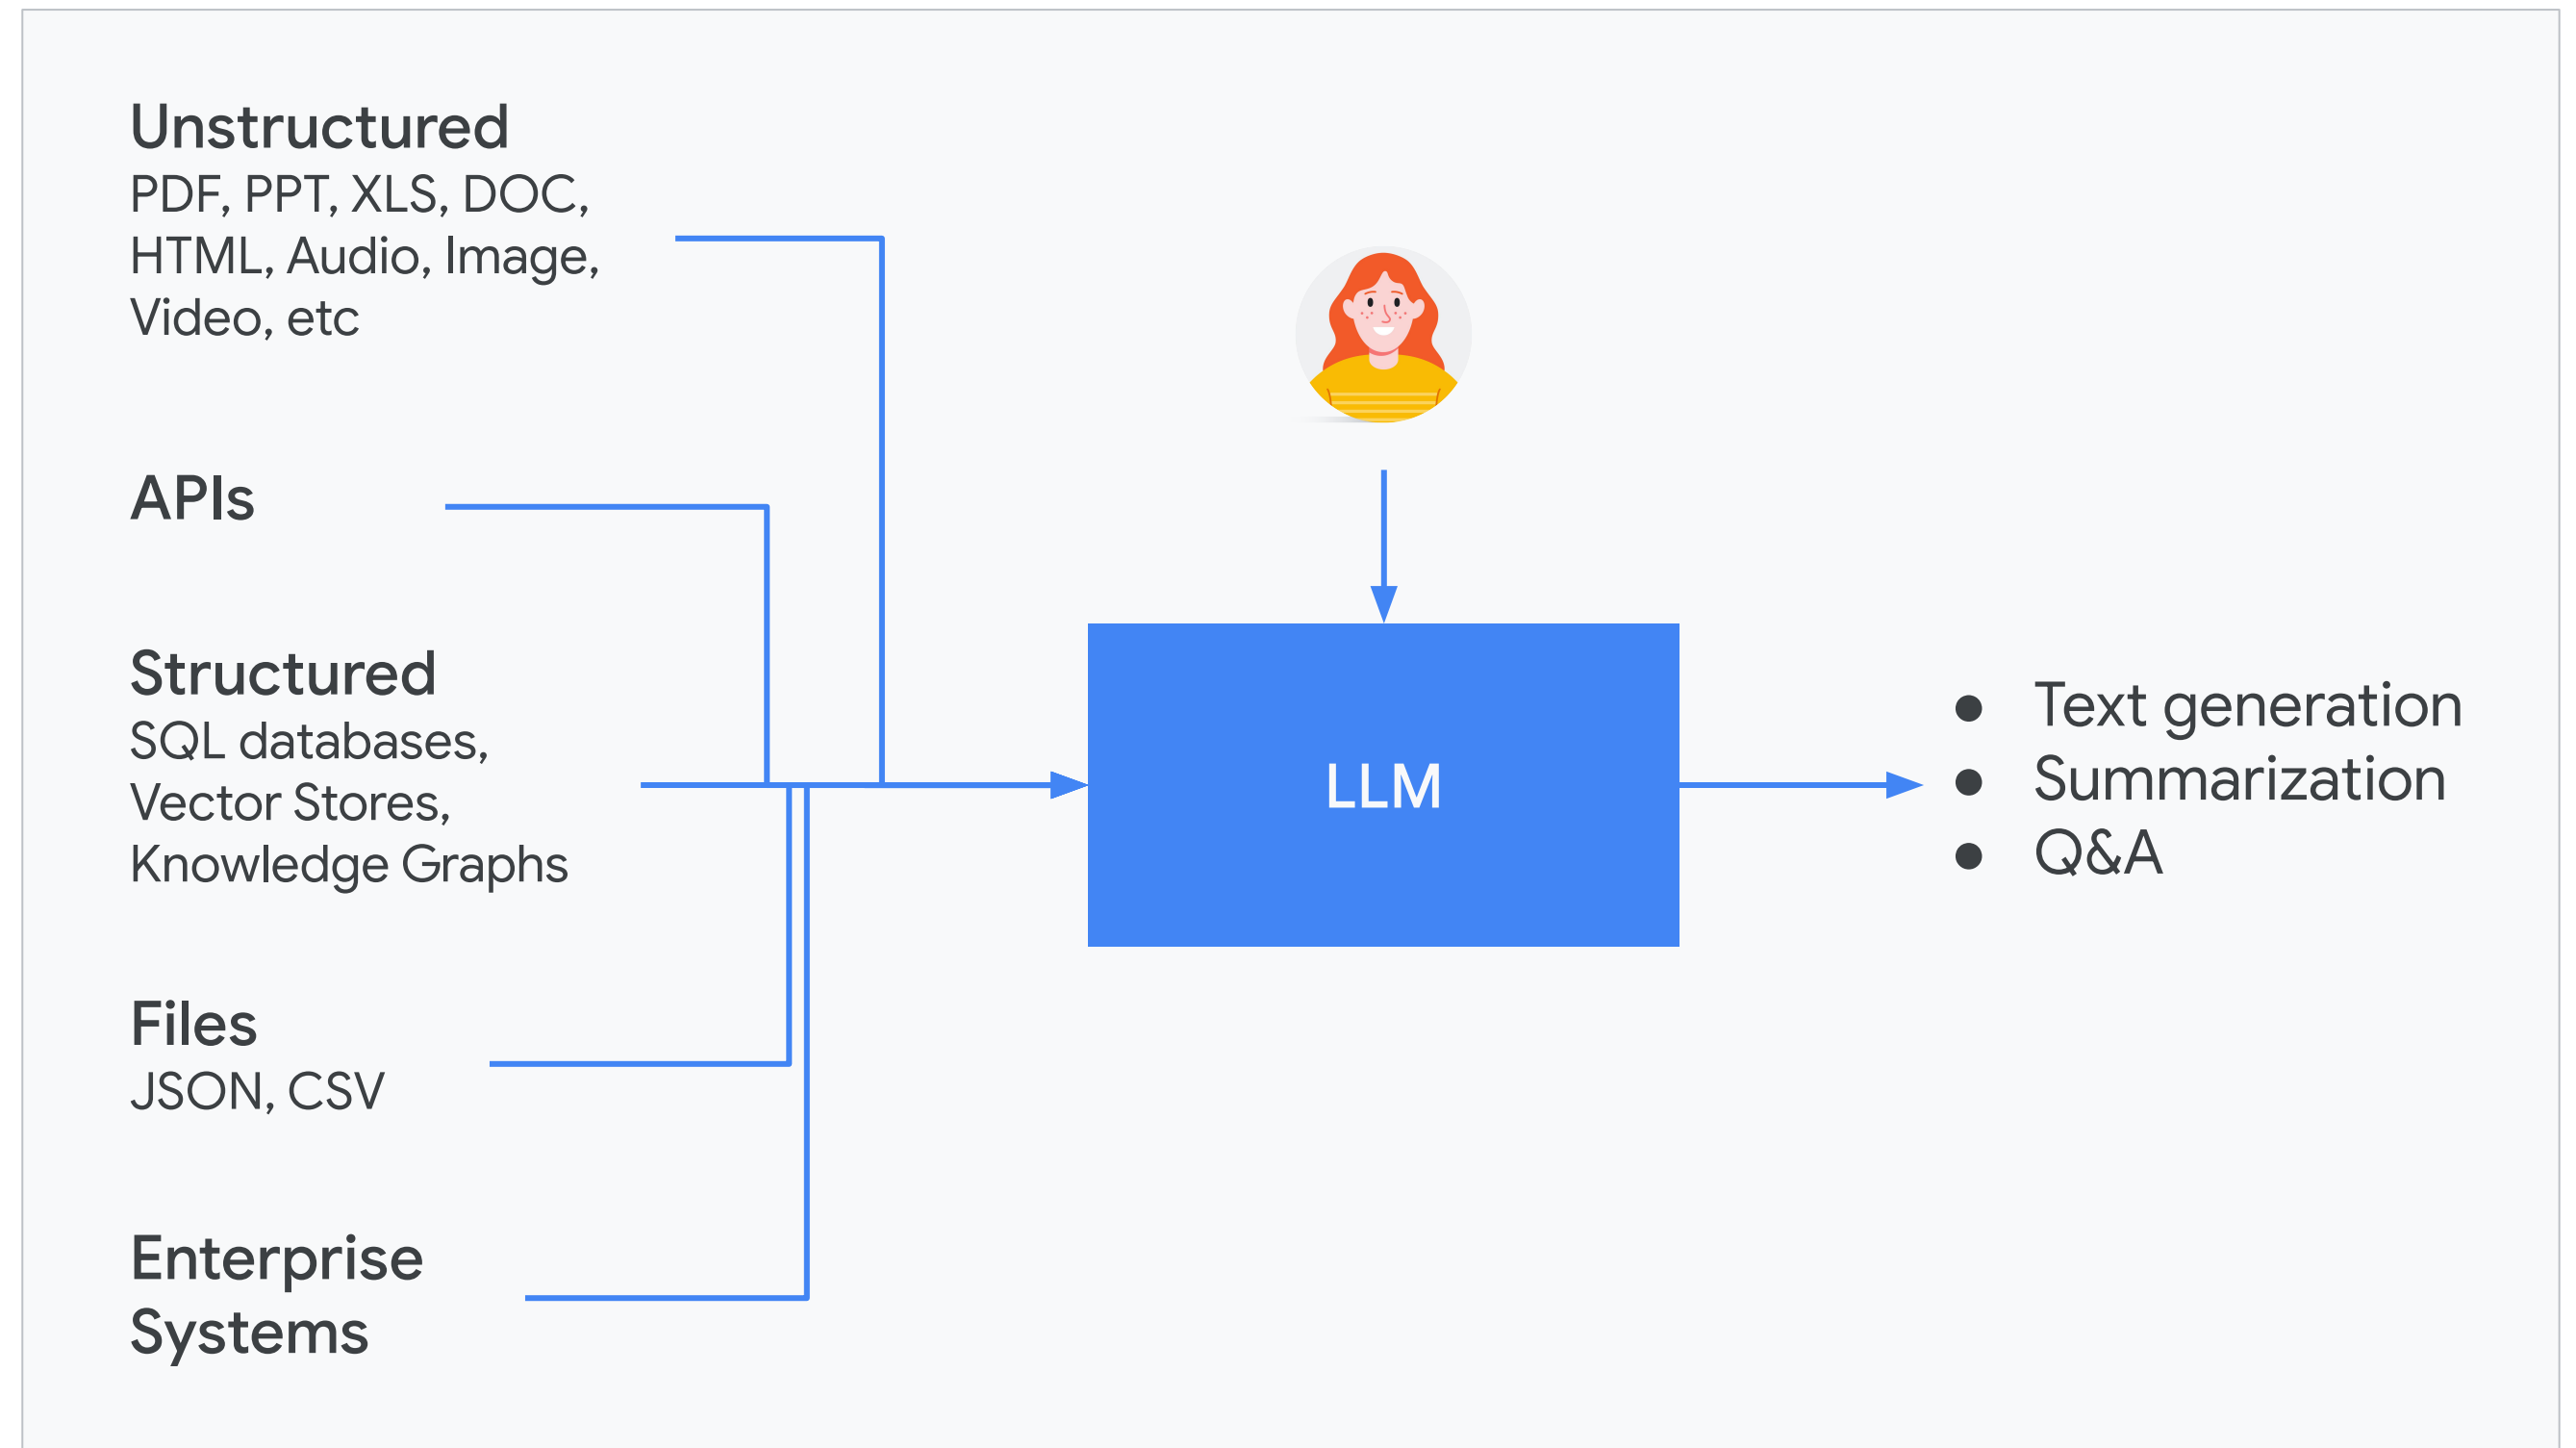

- Relatively simple
- Inexpensive
- Effective for most use cases

Fine tuning

- Requires training data
- More expensive
- Time consuming
- Effective, assuming the training data is high quality

How can you provide the model with external data?

- Add data to the prompt
- Make an API call or database lookup
- Use embeddings and Vector Search

Product Catalog management with Generative AI

Discussion: Based on the video, What are the tasks required for adding a product to the online catalog?

1. _____
2. _____
3. _____
4. _____
5. _____
6. _____
7. _____
8. _____

Task 1

Upload the product photo & link it to text by SKU

Can AI help with this task?

Task 1

Upload the product photo & link it to text by SKU

Can AI help with this task?

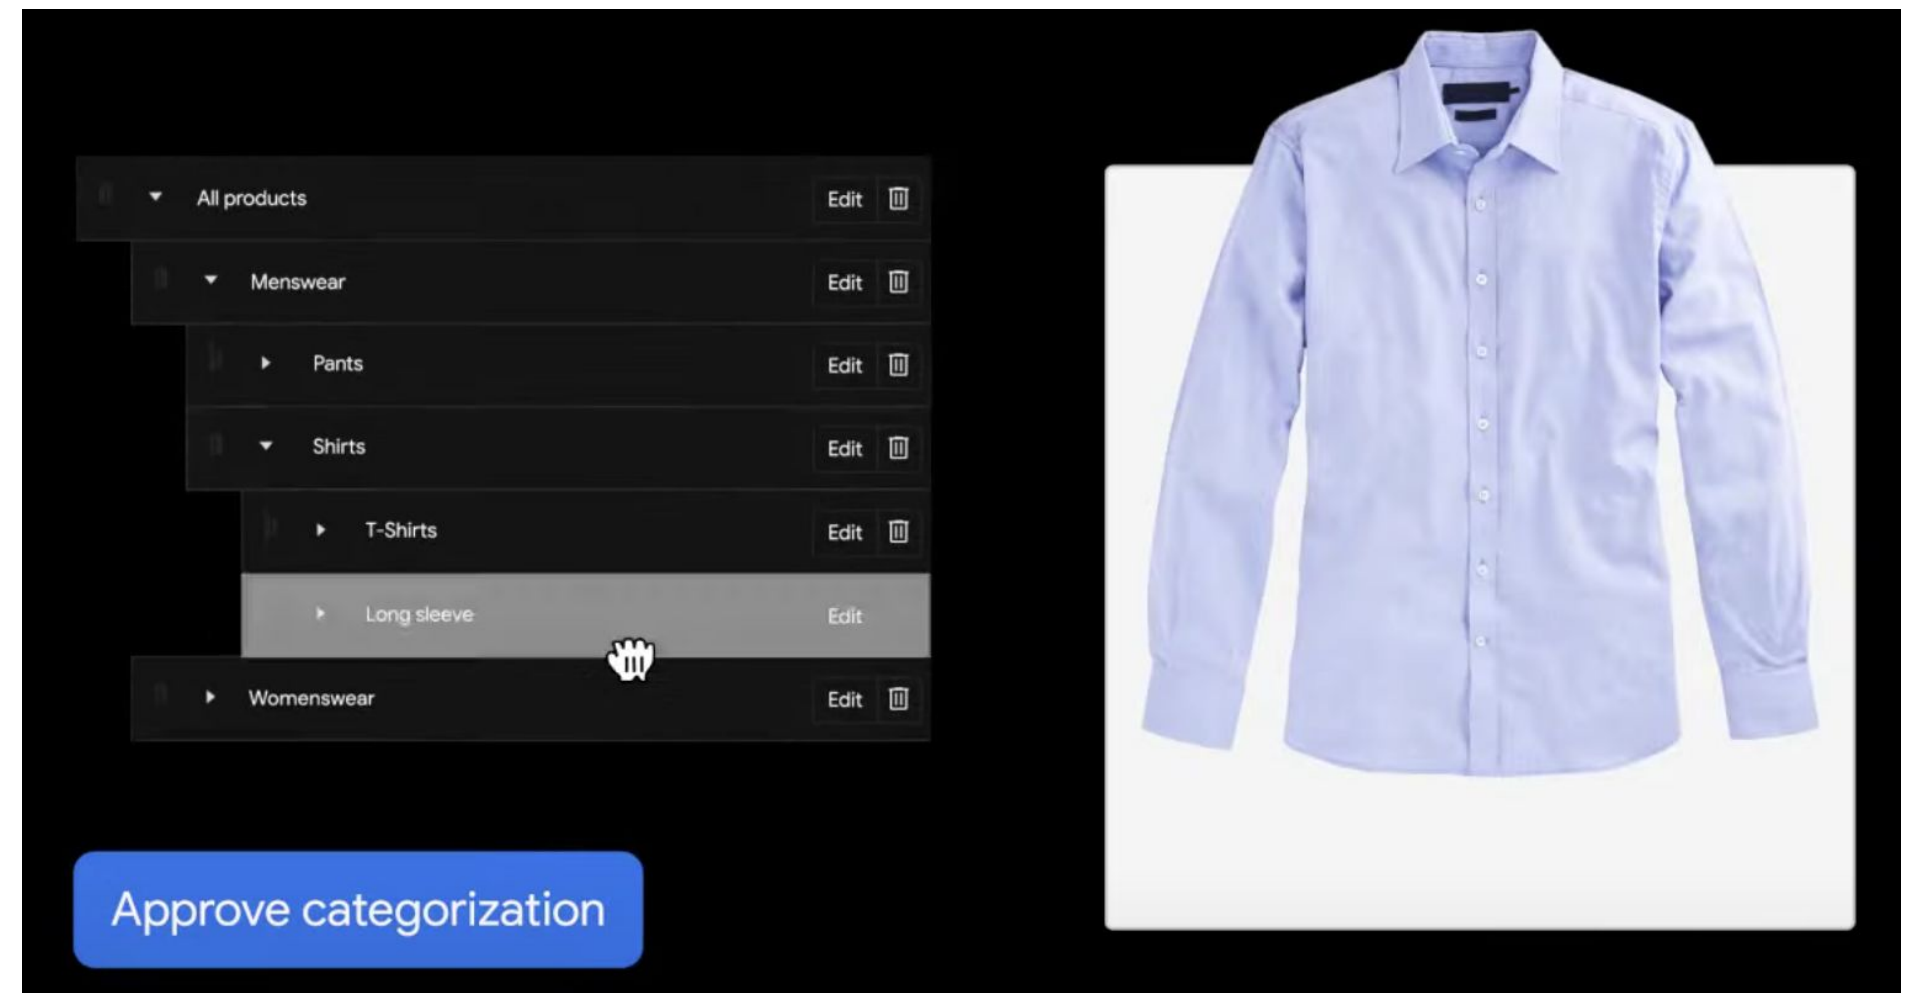

No, this is not a task for AI.

Task 2

Categorize the product

Can AI help with this task?
If so, how would we use it?

Task 2

Categorize the product

Can AI help with this task?
If so, how would we use it?

Possibly. Some options include:

- Get embeddings of the image and find the nearest product cluster
- Visual QA to ask, “Is this a men’s shirt?” etc.

Task 2

Categorize the product

If we didn't use GenAI, how would we approach this?

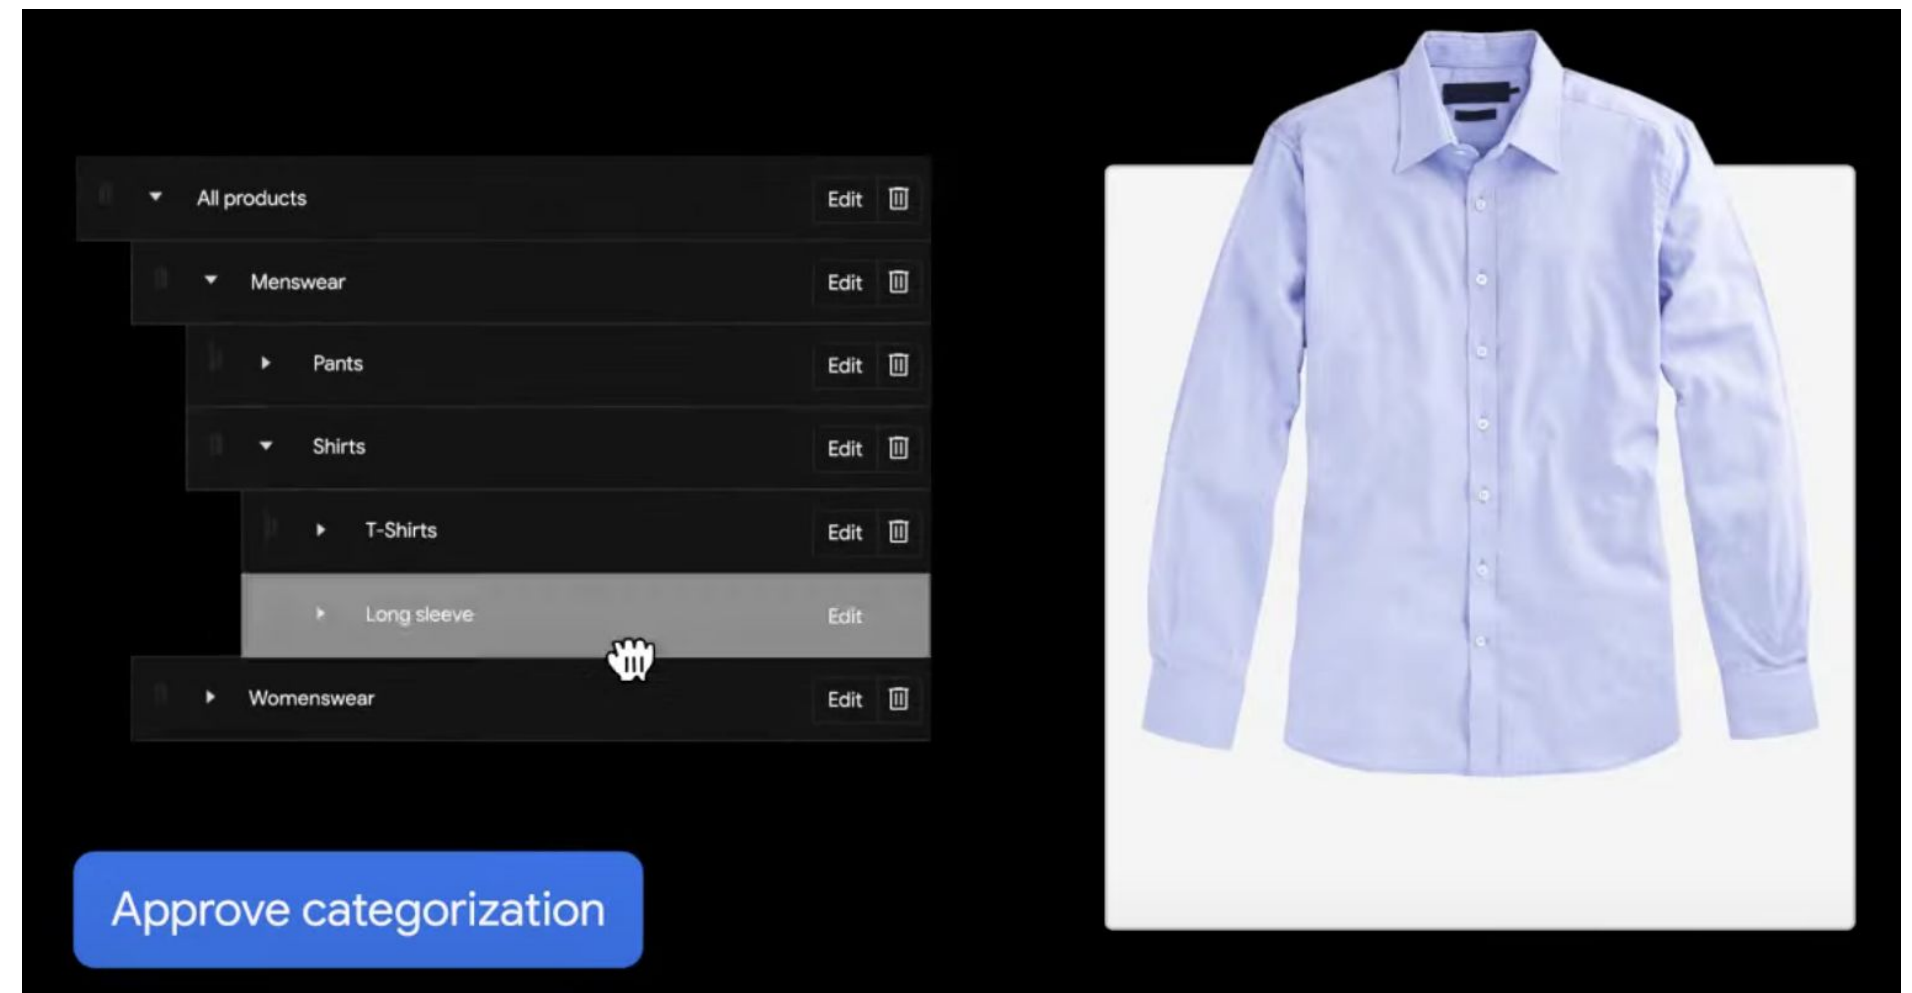

Task 2

Categorize the product

If we didn't use generative AI, how would we approach this?

Some options include:

- Human labelers
- AutoML multiclass & multi-label image classification

Task 3

Create tags (labels) for the product

Can AI help with this task?
If so, how would we use it?

Task 3

Create tags (labels) for the product

Can AI help with this task?
If so, how would we use it?

Some options include:

- Image captioning and extracting nouns & adjectives
- Visual QA to ask, “Please provide a comma-separated list describing attributes of this shirt.”

Task 3

Create tags (labels) for the product

If we didn't use generative AI, how would we approach this?

Some options include:

- Human labelers
- AutoML multiclass & multi-label image classification

Task 4

Generate a name for the product

Can AI help with this task?
If so, how would we use it?

Task 4

Generate a name for the product

Can AI help with this task?
If so, how would we use it?

Possibly. One option includes:

- Text-Bison with a high temperature and a context of other best-selling product names

Task 4

Generate a name for the product

If we didn't use generative AI, how would we approach this?

Some options include:

- Let our designers lead the market, rather than follow past trends
- Combine our tags, possibly with an ordering heuristic

Task 5

Write a product description

Can AI help with this task?
If so, how would we use it?

Product Description Page

✦ *Tell me what you need to build*

Write a detailed product description of this product for inclusion in the Spring collection, based on the product attribute list

This Spring, you can't beat a classic. This shirt has timeless styling - mid-weight pinpoint cotton, button cuffs and collar, and a tailored but not-too-tight fit - combined with modern features like wrinkle resistance and fade-free dye. 100% cotton, classic blue.

Task 5

Write a product description

Can AI help with this task?
If so, how would we use it?

Possibly. One option includes:

- Text-Bison with a high temperature and a context of the upcoming season (spring, holidays, etc.) and example product descriptions.

Task 5

Write a product description

If we didn't use generative AI,
how would we approach this?

Product Description Page

✦ *Tell me what you need to build*

Write a detailed product description of this product for inclusion in the Spring collection, based on the product attribute list

This Spring, you can't beat a classic. This shirt has timeless styling - mid-weight pinpoint cotton, button cuffs and collar, and a tailored but not-too-tight fit - combined with modern features like wrinkle resistance and fade-free dye. 100% cotton, classic blue.

Task 5

Write a product description

If we didn't use generative AI, how would we approach this?

A human approach:

- Manual updates by our marketing team

Task 6

Write product HTML metadata

Can AI help with this task?
If so, how would we use it?

Metadata:

```
<head>  
  <meta charset="UTF-8">  
  <meta name="description" content="Men's O|
```

Task 6

Write product HTML metadata

Can AI help with this task?
If so, how would we use it?

Possibly. One option includes:

- Using Codey to generate valid HTML given the list of SEO keywords & product tags

Metadata:

```
<head>
  <meta charset="UTF-8">
  <meta name="description" content="Men's O|
```

Task 6

Write product HTML metadata

If we didn't use generative AI,
how would we approach this?

Metadata:

```
<head>  
  <meta charset="UTF-8">  
  <meta name="description" content="Men's O|
```

Task 6

Write product HTML metadata

If we didn't use generative AI, how would we approach this?

A more traditional approach:

- Build the header deterministically from SEO keywords and approved product tags

Metadata:

```
<head>  
  <meta charset="UTF-8">  
  <meta name="description" content="Men's O|
```

Task 7

Translate product content into other languages

Can AI help with this task?
If so, how would we use it?

Localization

ENGLISH
This Spring, you can't beat a classic. This shirt has timeless styling - mid-weight pinpoint cotton, button cuffs and collar, and a tailored but not-too-tight fit - combined with modern features like wrinkle resistance and fade-free dye. 100% cotton, classic blue.

FILIPINO
Ngayong Spring, hindi mo matatalo ang isang klasiko. Ang kamiseta na ito ay walang tiyak na pag-istilo - mid-weight pinpoint cotton, button cuffs at collar, at isang pinasadya ngunit hindi masyadong masikip na fit - na sinamahan ng mga modernong tampok tulad ng wrinkle resistance ...

FRENCH
Ce printemps, vous ne pouvez pas battre un classique. Cette chemise a un style intemporel - coton pointu d'épaisseur moyenne, poignets et col boutonnés, et une coupe ajustée mais pas trop serrée - combinée à des caractéristiques modernes comme la résistance aux plis et la teinture ...

JAPANESE
この春、クラシックに勝るものはありません。このシャツは、中厚手のピンポイントコットン、ボタン付きの袖口と襟、テーラードでありながらタイトすぎないフィット感など、時代を超越したスタイルと、しわになりにくく色あせしない染料などの現代的な機能を兼ね備えています。綿100%、伝統的なブルー。

Task 7

Translate product content into other languages

Can AI help with this task?
If so, how would we use it?

Possibly:

- Feed the description to Text Bison and ask for the translation with a low temperature

Task 8

Create alternate images

Can AI help with this task?
If so, how would we use it?

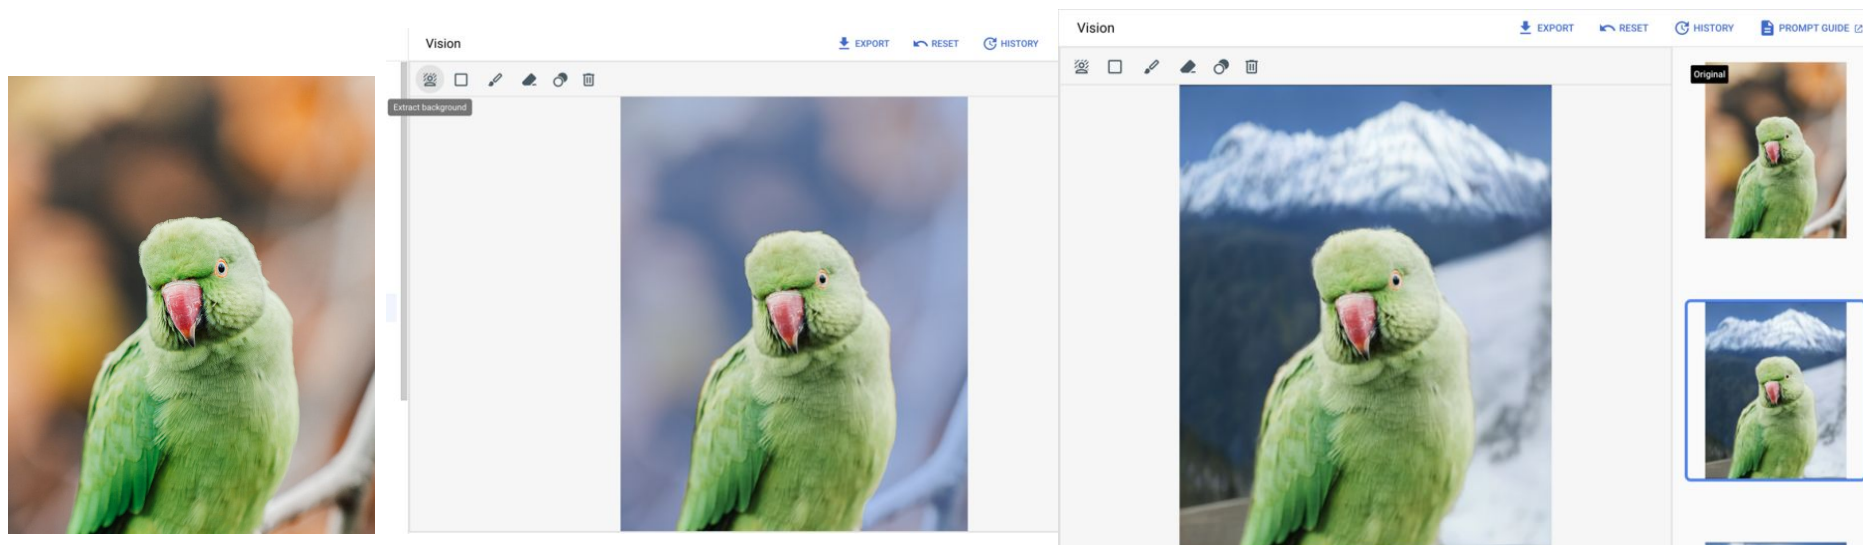

Task 8

Create alternate images

Can AI help with this task?
If so, how would we use it?

Possibilities:

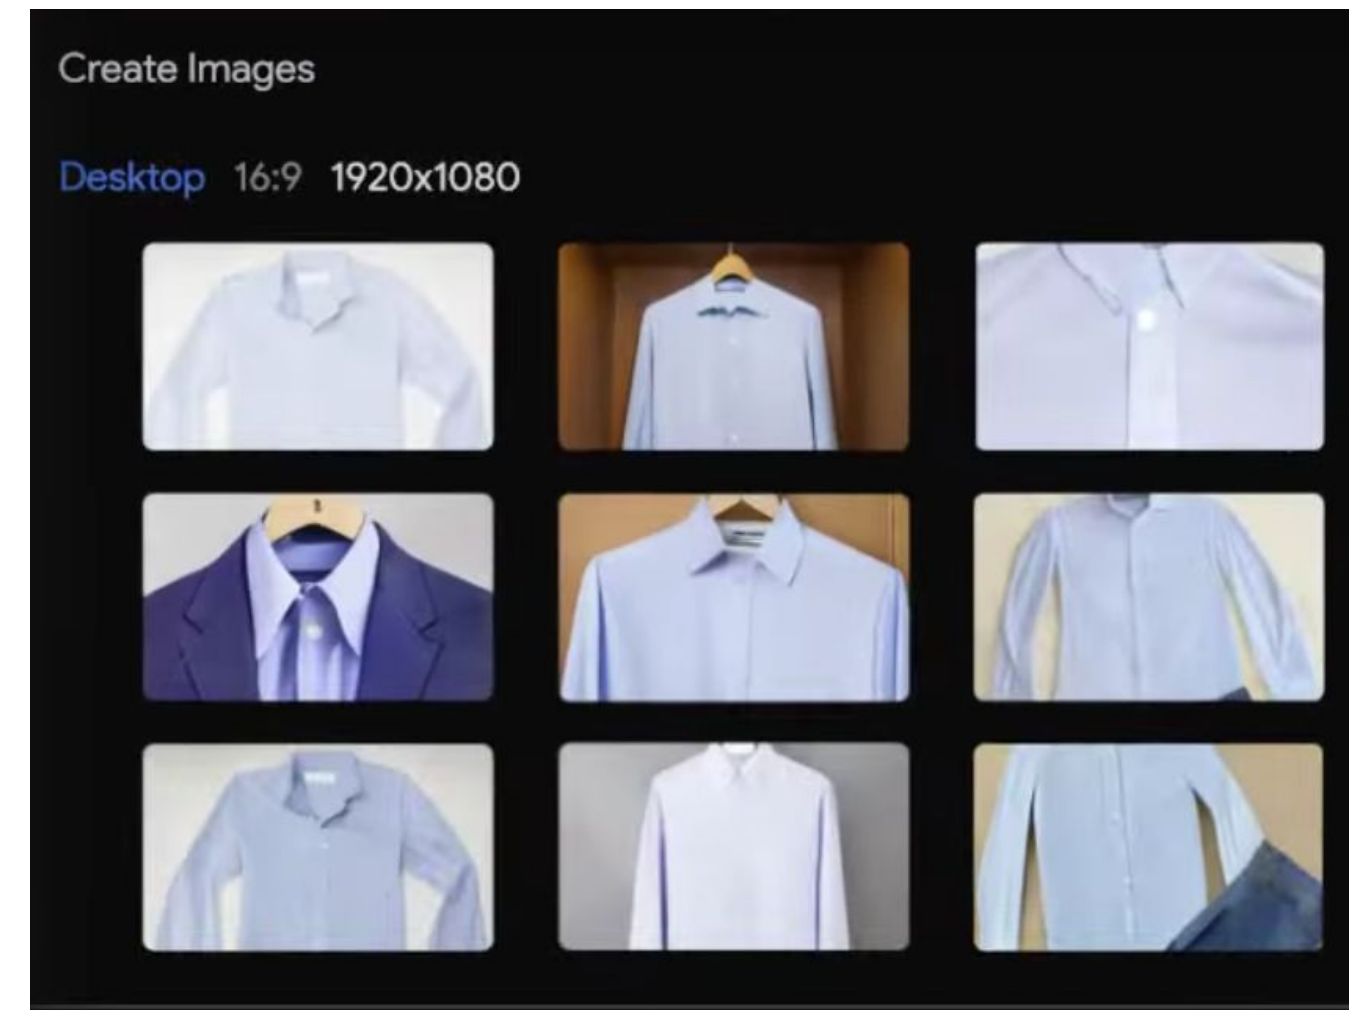

- Imagen using [masked-based](#) or [product background editing](#):

Task 8

Create alternate images

If we didn't use generative AI,
how would we approach this?

Task 8

Create alternate images

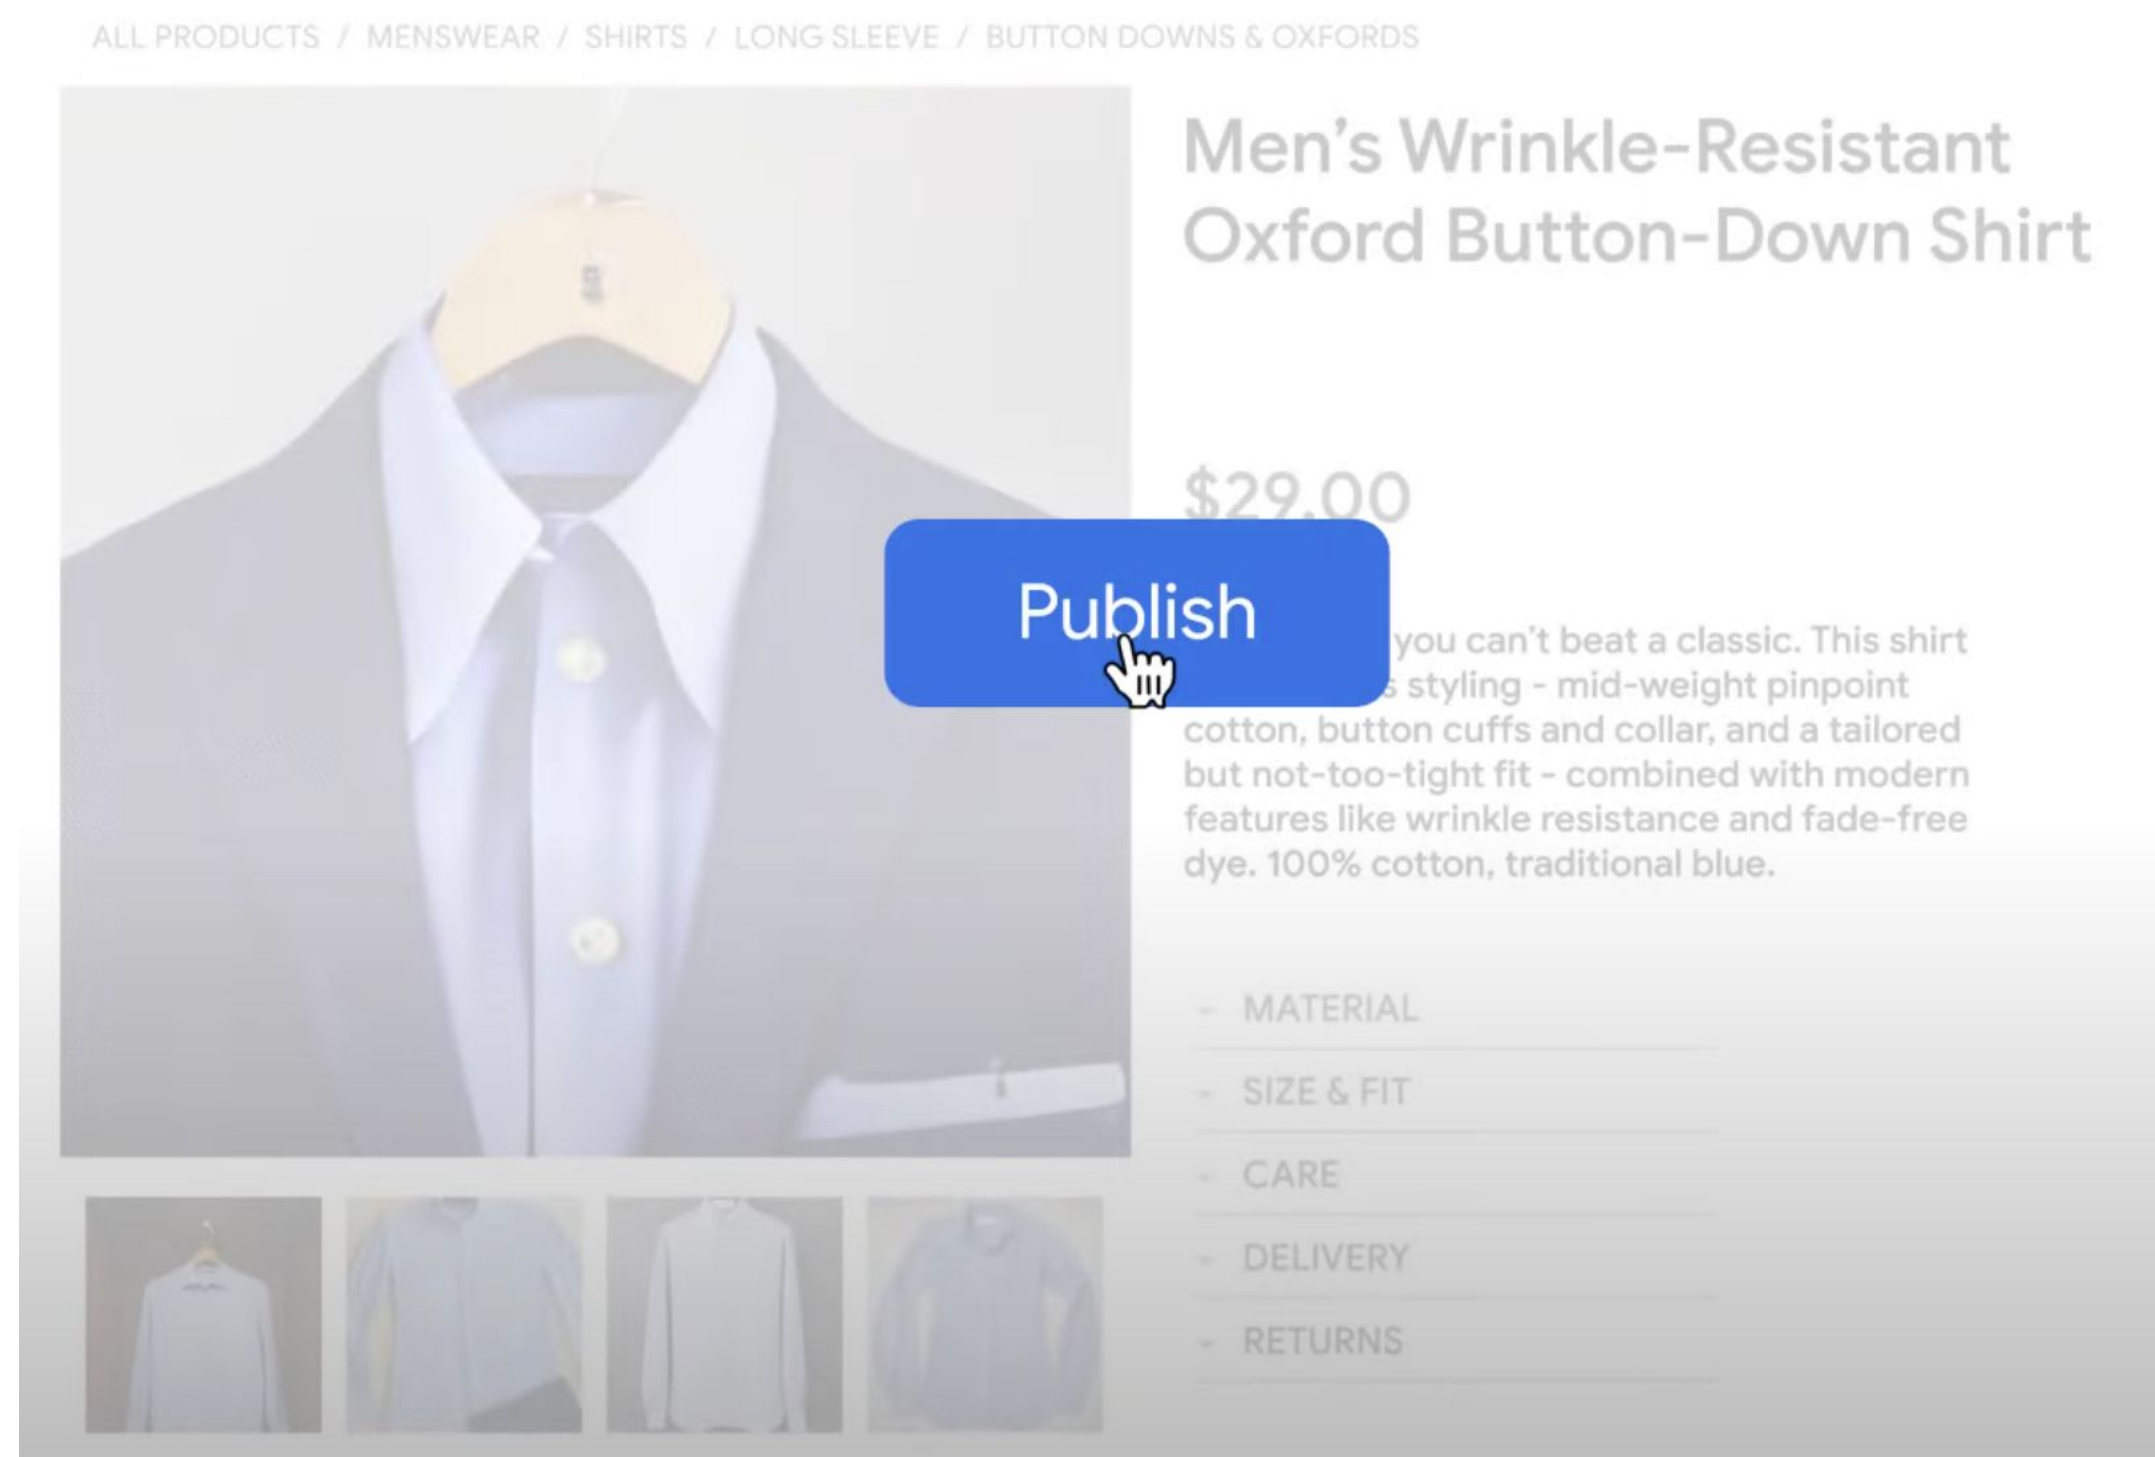

If we didn't use generative AI,
how would we approach this?

Other approaches:

- A team of human photographers / artists
- Solicit customer uploads

After the tasks are completed, publish the product

Discussion: At what steps in this process was there a human in the loop verifying the accuracy of the AI?
